stages of the cell cycle for a plant cell. Interphase not actually a part of the nuclear division known as mitosis but represents the visual appearance of the nucleus prior to and after mitosis.

### **Mitosis Assignment - Answer Key - Arkansas State University**

In advanced multicellular organisms, all the divisions from zygote (formed by the fusion of two gametes) to the adult are of mitosis type, giving rise to genetically identical cells of the individual. Generally, the organisms reproducing asexually give rise to genetically similar organisms (clones) within a species, except for variations arising due to mutations or other means, causing somaclonal variation.

Mitosis is the division of a cell into two daughter cells that are genetically identical to the parent cell. Meiosis is the division of a germ cell into four sex cells (e.g. egg or sperm), each with half the number of chromosomes of the parent cell. Mitosis is a means of asexual reproduction, whereas meiosis is necessary for sexual reproduction.
