Introduction to manipulating bar charts and pie charts in Microsoft Excel. Includes problem solving tasks with self-assessment 'I can' statements at each step of the lesson. Final activity can be extended to a written task (you could get pupils to produce a holiday brochure etc.)

Graphs and Weather (Excel) | Teaching Resources

The Canadians' 2003 study showed the "hockey stick" curve "is primarily an artefact of poor data handling, obsolete data and incorrect calculation of principal components." When the data was corrected it showed a warm period in the 15th Century that exceed warmth of the 20th Century. 3/ in our papers, we did not take a position on modern warm period vs medieval warm period.

Mixed data and task parallelism finds applications in the global climate modeling. Large data parallel computations are performed by creating grids of data representing earth's atmosphere and oceans and task parallelism is employed for simulating the function and model of the physical processes. In timing based circuit simulation.

Data parallelism - Wikipedia

Determine the range of data by subtracting the maximum and minimum temperature values (e.g., $14.87-13.54=1.33$). Placing the graph paper in portrait orientation allows for approximately 40 lined intervals. Determine scale by asking which place value (ones, tenths, hundredths, etc.) should be used.
