### Service Oriented

#### **the Windows ...**

In this section. This section of the documentation provides information about Windows Communication Foundation (WCF), which is a unified programming model for building service-oriented applications. It enables developers to build secure, reliable, transacted solutions that integrate across platforms and

**Windows  
Communication  
Foundation - WCF |  
Microsoft Docs**

SOA or Service-oriented  
Architecture is a  
method through which  
different types of  
services can interact  
with each other  
independently. A  
service is a self-  
contained part of the  
functionality, and

different platforms and

languages to form

applications. In SOA, a

service is a self-

contained unit of

software designed to

complete a specific

task. Service-oriented

architecture allows

various services to

communicate using a

loose coupling system

to either pass data or

coordinate an activity.

Loose coupling refers

to a client of a service

remaining independent

# Online Library

## Developing

### Service Oriented

A Service Oriented Architecture (or SOA) is an approach to software

development by which discrete business functions and data interactions occur

through a predefined, machine-friendly

syntax. Think about when you submit an e-mail signup form on a website.

#### Applications

# is It, and What Can

## It...

Because you can start developing services independently and run them side by side (thanks to containers and .NET Core), you can start using the latest technologies and frameworks expediently instead of being stuck on an older stack or framework for the whole application.

Downsides of a microservice-based
