Equivalent Fractions: StudyJams! Math | Scholastic.com

Step 1: Find an equivalent fraction for both fractions, so that they both have the same denominator
4 + 1 = a) find the LCM of the denominators
8: 8, 16, 24, 32
6: 6, 12, 18, 24, 30
b) find the equivalent fraction
 $4 \times 3 = 12$
 $1 \times 4 = 4$

Read Free Equivalent Fractions Study Guide

Step 2: Once the denominators are the same, add or subtract the numerators
 $12 + 4 = 16$

same number $\frac{2}{4} = \frac{1}{2}$ or $\frac{2}{8} = \frac{1}{4}$ so $\frac{8}{4} = \frac{4}{2} = 2$ Similarly $\frac{9}{5} = \frac{18}{10}$ or $\frac{9}{5} = \frac{27}{15}$ so $\frac{9}{5} = \frac{18}{10} = \frac{27}{15}$ You can see from the above examples that each fraction has an infinite number of fractions that are equivalent to it. $\frac{8}{4} = \frac{4}{2} = 2$
 $\frac{4}{2} = 2$
 $\frac{2}{1} \times 2 \times 2 \times 3 \times 3$
