High Tunnel Hoop House Construction

High tunnel hoop houses are relatively inexpensive to construct, costing around \$2.50 per square foot, with low maintenance once constructed. They are easy to build and adapt to small or large land units to meet the needs of gardeners and farmers alike. Since plants need sunlight to grow, light penetration should be a concern in structure design.

NMSU: High Tunnel Hoop House Construction for New Mexico

Download Construction for 12ft x 40ft Hoop House One person can complete most of the construction, but inserting the hoops and putting on the plastic requires at least two people. Also, it is nice to have someone to share the heavy work of driving in the ground posts. A crew of four can easily construct a high tunnel of this design in a single day.

Affordable Commonly called hoop houses, high tunnels, or cold frames, non-engineered greenhouses are hands down the best bang for you buck when you're looking to install an enclosed growing space. These greenhouses feature sturdy steel frames and cost-effective plastic film as a covering.

Hoop Houses, High Tunnels, & Cold Frame Greenhouses ...

High tunnels generally have steel pipe frames set into the ground and are covered with one or two layers of greenhouse-grade plastic. They are irrigated using drip systems, hand watering or small sprinklers. Roll-up sidewalls, usually hand cranked but sometimes automated, provide ventilation in hoop house construction. They may also have end-wall vents (louvers) or ridge vents.
