Model-driven engineering (MDE): any software engineering process where models have a fundamental role and drive the engineering tasks. Model-driven development (MDD): MDE applied to forward engineering, i.e. model-driven for software development. MDA is the OMG's particular vision of MDD and thus relies on the use of OMG standards.

Low-code vs model-driven: are they the same?

Model-driven engineering (MDE) is a software development methodology that focuses on creating and exploiting domain models, which are conceptual models of all the topics related to a specific problem.Hence, it highlights and aims at abstract representations of the knowledge and activities that govern a particular application domain, rather than the computing (i.e. algorithmic) concepts.

OMG's ADTF (Analysis and Design Task Force) group leads this effort. With some humour, the group chose ADM (MDA backwards) to name the study of reverse engineering. ADM decodes to Architecture-Driven Modernization. The objective of ADM is to produce standards for model-based reverse engineering of legacy systems.
